FIG.3

A black and white photograph of a document page. At the top, there are six numbered columns labeled 1, 2, 3, 4, 5, and 6. The page contains several horizontal bands of dark, textured material, possibly tape or ink, across the middle and bottom sections. The overall appearance is grainy and high-contrast.

SDS-PAGE gel showing the effect of  $\beta$ -ME on the reduction of a protein complex. The gel has 9 lanes. Lanes 1-3 are labeled 0mM  $\beta$ -ME, lanes 4-6 are 10mM, lanes 7-8 are 20mM, and lane 9 is 30mM. Molecular weight markers are indicated on the left at 43, 29, and 18.4 kDa. A prominent band is visible at approximately 20 kDa in all lanes, which becomes more intense with higher  $\beta$ -ME concentrations.
